

Building a Mach-O application for the Mac:

XCode version 2.0 or later is recommended.

The "libSPAPILibMachO.a" library is intended to be used in a Mach-O application or plug-in, that normally includes the Carbon.framework.

Building a Carbon application for the Mac:

Metrowerks CodeWarrior version 7.0 or later is recommended.

The "SPAPILibCarbon" library is intended to be used in a Carbon application or plug-in, that normally links with "CarbonLib".

The "SPAPILibCarbon" library **MUST** be the first item in the Link Order.

The following libraries should be added to the project:

- SPAPILibCarbon
- CarbonLib
- MSL_All_Carbon.lib

Once compiled, expect CodeWarrior to show many Link Warnings, especially "previously defined in "SPAPILibCarbon".

Building an application for Mac OS 8.6 - 9.x:

Metrowerks CodeWarrior version 6.3 or later is recommended.

The "SPAPILibPPC" library is intended to be used in a non-Carbon application or plug-in, that normally links with "InterfaceLib".

The "SPAPILibPPC" library **MUST** be the first item in the Link Order.

The following libraries should be added to the project:

- SPAPILibPPC
- MSL RuntimePPC.Lib
- MSL C++.PPC.Lib
- MSL C.PPC.Lib
- InterfaceLib

MathLib
UnicodeConverter
TextEncodingConverter
TextCommon
ThreadsLib
OpenTptInetPPC.o
OpenTptInternetLib
OpenTransportAppPPC.o
OpenTransportLib
NSLPPCLib
PLStringFuncsPPC.lib

AppearanceLib
NavigationLib

The "AppearanceLib" and " NavigationLib" are not necessarily needed but they are used in the SampleApp.

Once compiled, expect CodeWarrior to show many Link Warnings, especially "previously defined in "SPAPILibPPC".
